PROFILE

Sole software developer at A.J. Worldwide's Chennai back office, supporting US and UK freight-forwarding operations. Teams bring me a business requirement; I own everything after that: architecture, data model, UI, APIs, n8n automation, AI integration, hosting and support. In three years that has become 37 live systems used by 250 operations staff, including two customer-facing products and AI pipelines that read hundreds of shipping documents a day. Before software I founded and ran a fabrication business supplying Indian Railways, so I build with cost, users and deadlines in mind.

✨ AI-driven development

I build with Claude as an AI pair programmer. I decide the architecture, data model and edge cases; Claude speeds up scaffolding, refactors, migrations and documentation; I review, test and can explain every line before it ships. It lets one developer deliver at the pace of a small team.

EXPERIENCE

Software Developer, Systems & Automation

Oct 2023 – Present

A.J. Worldwide Services · Office Framework Operation Gen, Chennai

🏆 Extra Mile Award 2025–26 · recognised for performance and going beyond my role

Only developer in the organisation. I turn requirements from US and UK operations teams into production systems and run them end to end, working in agile, iterative cycles: ship a working first version fast, then keep adding features from user feedback.

AI & automation

- Built an AI arrival-notice pipeline (25-node n8n workflow + Gemini 2.5 Flash) that reads 200–300 carrier PDFs a day, extracts BL and container data, matches the responsible operator and emails them automatically.
- Cut AI cost by removing duplicate PDFs with a content hash stored in the database before any document is sent to the model.
- Built AI Email Suite: turns Outlook shipment threads into billing-review PDFs and trucker-vetting emails into Excel vetting sheets, with Gemini or Claude switchable by one setting.
- Automated 16 systems with n8n: mailbox ingestion, webhook-driven status changes, escalation state machines and scheduled report emails.
- Earlier UiPath RPA bots (email routing, Outlook to Excel to database processing, scheduled scraping) removed about 3 FTE of manual work.

Platforms & architecture

- Architecting a 103-table Sales Force Management System for US and UK entities with a central scope filter and role-based redaction of financial data (in staged development).
- Built the Ocean Exports Workspace: 34+ tables, 20 controllers, n8n ingestion, quotation PDFs and live links to billing and pricing tools.
- Standardised on custom PHP 8 MVC, MySQL/MariaDB and REST APIs with key authentication and rate limiting; every system is version-controlled in the company's private GitHub organization.

Software Developer, Systems & Automation (continued)

Oct 2023 – Present

A.J. Worldwide Services · Office Framework Operation Gen, Chennai

Customer products & security

- Shipped ShipFlow-UK, air-freight tracking with a customer console and a rate-limited customer REST API, plus a multi-tenant warehouse portal for external customers.
- Built fraud-prevention tools: one-click Outlook sender verification (domain age, trusted vendors, address checks, AI scoring) and carrier verification using FMCSA federal data.

Finance & compliance workflows

- Moved Excel-based work into audited web workflows: US customs entry (8 stages), ISF entry filing, accounts receivable with 7 roles and OTP login, unbilled-revenue tracking, vendor-invoice escalation and dispute management.
- Replaced the company's ClickUp subscription with ProjectDesk, an in-house Kanban tracker with custom workflows and AI-drafted task descriptions.

Founder

Aug 2018 – Oct 2023

MECHOD · Fabrication, Chennai

- Founded and ran a fabrication business supplying Indian Railways (ICF) through public tenders.
- Handled procurement, production planning, quality control, costing and customer relations.
- Taught myself web development alongside the business and delivered freelance builds, including a warehouse-listing platform with Google Maps.

SKILLS

AI & automation

Claude (AI-driven development)
n8n
Google Gemini API
Document extraction
UiPath RPA
Excel VBA

Backend & data

PHP 8 (custom MVC)
REST API design
MySQL / MariaDB
Schema design & migrations
Stored functions
PDO

Frontend

JavaScript
HTML / CSS
Bootstrap / Tailwind
React + TypeScript
Capacitor (Android)
Chrome extensions

Integrations

IMAP / Gmail
Resend / EmailJS
FMCSA API
Google Maps & Address
RDAP / WHOIS
Webhooks

Documents & reporting

PhpSpreadsheet (chunked Excel ETL)
SheetJS
mPDF / FPDF / TCPDF
KPI dashboards

Security & delivery

Agile, iterative delivery
Git / GitHub
Role-based access
OTP two-factor login
API keys & rate limits
Linux hosting
Cron jobs

STRENGTHS

End-to-end ownership

From the first conversation with users to hosting and support.

Business sense

Five years running my own company taught cost, deadlines and customers.

Agile delivery

Ship a working first version, then improve it in short cycles from user feedback.

Fast, careful delivery

AI-assisted speed with human review of every change.

EDUCATION

B.E. Production Engineering

Velammal Engineering College, Chennai
2017 · CGPA 7.4
